Github account

Software engineer with over 15 years of cumulative professional/internship experience. Versatile, bilingual professional with expertise from projects in the aerospace, gaming, consulting, e-signature, fintech and data visualization industry.

Experience

2023–

Highnote

San Francisco, United States

Senior Software Engineer (Java, Typescript, GraphQL, GCP, Temporal, Elastic Search, Python)

- **Enhanced** the rule engine by enabling all types of rule removal and archiving for the operational risk team.
- **Trailblazed** a new geolocation rule, providing a better tracking analysis on 1.5M+ monthly card transactions through customizable geofencing.
- **Galvanized** my team into adopting new technologies, like Elastic Search and Temporal, by being the first developer to tackle initiatives using them.
- **Established** new blocking mechanisms on fraudulent account holders, by preventing them from performing certain specific actions (perform card transactions, account creation, etc.).
- **Introduced** Twilio as our new core SMS provider and supported teams doing the surgical switch from AWS Pinpoint. Leveraged this new provider to introduce a bi-directional actionable fraud detection conversation workflow (using Temporal) for our subscribers.
- **Improved** Highnote's natural language querying capabilities with fuzzy search support, by enhancing our ANTLR parser/lexer rules.

2019–2023

Tableau

Palo Alto, United States

Senior Software Engineer -> LMTS (React/Redux, Typescript, Java, C++/Qt)

- **Improved** on the newly released Object Graph project in the Data pane of Tableau, by adding transition animations, updated tooltips, alphabetical sorting in the graph, rerooting, etc.
- **Contributed** to the hybridization of a new Data Preview Area module to showcase the metadata/data grid + embedded relationship editor.
- **Onboarded** a new AI predictive model content type within Tableau Server, in order to integrate with Salesforce's Einstein discovery, contributing to 93+ Billion predictions per day.

2016–2019

Paysafe

Montréal, Canada

Java Developer (Angular 2+, Typescript, Java 7/8, Spring, Oracle)

- **Innovated** on a new frontend project in Angular 2+ for the new Merchant Portal application.
- **Invigorated** the Netbanx codebase by fixing bugs, adding unit tests, removing errors/warnings and implementing new features.
- **Slashed** execution time of frontend tests by a factor of six by switching from PhantomJs to the Nightmare browser automation library.

Programming

Personal Skills

Languages
French ★★★★★
English ★★★★★

- 2014–2016 **eSignLive** [Montréal, Canada](#)
Java Developer (Java 7/8, Guava, Spring, AWS, MySQL)
• **Reduced** downtime of the Windows document converter by 50%.
• **Integrated** technologies: Equifax, Twilio, PDFBox, Google Noto Fonts.
- 2012–2014 **Avanade** [Montréal, Canada](#)
Application Developer:

Internship Experience

- 2011 **Electronic Arts Canada** [Burnaby, Canada](#)
Software Engineer Intern (C#/.NET, C++)
• **Implemented** a distributed system managing thousands of automated online bots to load test SSX's multiplayer server; showcased at Gamescom in Germany.
- 2010 **Autodesk** [Montréal, Canada](#)
Software Engineer Intern (C++, Qt, Python)
• **Developed** an animation plug-in inside Maya using C++ and Qt with the Games team.
- 2009 **Ubisoft** [Québec, Canada](#)
QA Developer Intern (C#/.NET)
- 2008 **Lockheed Martin** [Montréal, Canada](#)
Software Evaluator Intern

Education

- 2007–2011 **Bachelor** of Computer Engineering [Université de Sherbrooke](#)
Specialization in Software Engineering & Artificial Intelligence

Certifications/Courses & Conferences

- Angular 2 Professional Certification (December 2016)
- QCon New York 2018 Conference
- Tableau 2019 Boot Camp
- Educative.io: Mastering Big Data with Apache Spark and Java + Fundamentals of AWS
- Elastic Search: Semantic search excellence: Getting started with AI
