Software engineer with over 14 years of cumulative professional/internship experience. Versatile, bilingual professional with expertise from projects in the aerospace, gaming, consulting, e-signature, fintech and data visualization industry.

Experience

2023–

Highnote

San Francisco, United States

Senior Software Engineer (Java, Typescript, GraphQL, GCP)

- **Enhanced** the rule engine by enabling rule removal and archiving for the operational risk team.
- **Trailblazed** a new geolocation rule, providing a better tracking analysis on 1.5M+ monthly card transactions through customizable geofencing.
- **Galvanized** my team into adopting Elastic Search, by being the first dev to ingest data from Spanner and create an ES searchable index on risk event queues and investigations.
- **Established** new blocking mechanisms on fraudulent account holders, by preventing them from performing certain specific actions (perform card transactions, creation accounts, etc.). Collaborated with the txn team for feature discussion and development.

2019–2023

Tableau

Palo Alto, United States

Senior Software Engineer -> LMTS (React/Redux, Typescript, Java, C++/Qt)

- **Improved** on the newly released Object Graph project in the Data pane of Tableau, by adding transition animations, updated tooltips, alphabetical sorting in the graph, rerooting, etc.
- **Contributed** to the hybridization of a new Data Preview Area module to showcase the metadata/data grid + embedded relationship editor.
- **Onboarded** a new AI predictive model content type within Tableau Server, in order to integrate with Salesforce's Einstein discovery, contributing to 93+ Billion predictions per day.
- **Participated** in a few recruiting interviews and mentored an intern during the summer of 2021, alongside one of my colleague.

2016–2019

Paysafe

Montréal, Canada

Java Developer (Angular 2+, Typescript, Java 7/8, Spring, Oracle)

- **Innovated** on a new frontend project in Angular 2+ for the new Merchant Portal application.
- **Invigorated** the Netbanx codebase by fixing bugs, adding unit tests, removing errors/warnings and implementing new features.
- **Slashed** execution time of frontend tests by a factor of six by switching from PhantomJs to the Nightmare browser automation library.

2012–2014

eSignLive

Montréal, Canada

Java Developer (Java 7/8, Guava, Spring, AWS, MySQL)

- **Reduced** downtime of the Windows document converter by 50%.
- **Integrated** technologies: Equifax, Twilio, PDFBox, Google Noto Fonts.

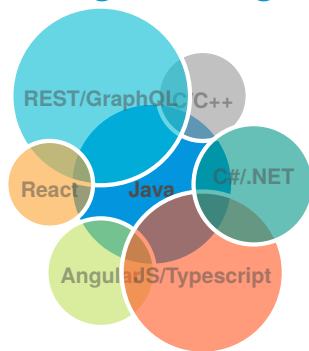

2012–2014

Avanade

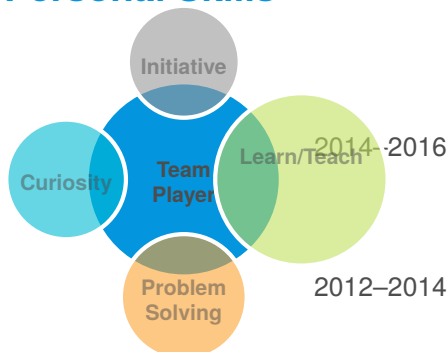

Montréal, Canada

Application Developer:

Internship Experience

2011	Electronic Arts Canada <i>Software Engineer Intern (C#/.NET, C++)</i> Burnaby, Canada • Implemented a distributed system in C++/C# managing thousands of simultaneous automated online bots to test the load on SSX snowboard game's server, in collaboration with the Online/UI team. • Designed and assembled a telemetry lookup system in ASP.NET using heat map data to illustrate the activity of players. • Showcased the online bot tool to fellow interns, which was used afterwards to help present the multiplayer component of the game at Gamescom in Germany.
2010	Autodesk <i>Software Engineer Intern (C++, Qt, Python)</i> Montréal, Canada • Developed an animation plug-in inside the Maya software using C++ and Qt with 4 other members of the Games team. • Wrote and tested mathematical functions in Python for a bloc programming tool used by designers/artists for animation blending, applying what I learned during the internship.
2009	Ubisoft <i>QA Developer Intern (C#/.NET)</i> Québec, Canada
2008	Lockheed Martin <i>Software Evaluator Intern</i> Montréal, Canada

Education

2007–2011	Bachelor of Computer Engineering Specialization in Software Engineering & Artificial Intelligence Université de Sherbrooke
-----------	---

Certifications/Courses & Conferences

- Angular 2 Professional Certification (December 2016)
- QCon New York 2018 Conference
- Tableau 2019 Boot Camp
- Educative.io: Mastering Big Data with Apache Spark and Java + Fundamentals of AWS
- Elastic Search: Semantic search excellence: Getting started with AI

Interests

Professional: cryptocurrency (did some mining back in 2013-2014), functional programming, machine learning & data science, software architecture, algorithms, design patterns, agile methodologies.

Personal: saxophone, reading, cooking, skiing, running, biking, hiking, traveling
